

## **The MACK Group, LLC Completes Interior Demolition and Decontamination Project**

**The MACK Group, LLC**, a premier asbestos abatement, decontamination and flooring removal contractor recently completed the decontamination, demolition and removal of 2 dryers from an active Fortune 500 pharmaceutical facility.

The Mack Group, LLC utilized a crew of five trained and safety conscientious technicians to first setup a dust barrier system. The dust barrier system, which consisted on polyethylene sheeting and negative air machines and ductwork, was necessary to prevent the migration of contaminated dusts from the work area into the active clean areas of the facility.

Once the dust controls were in place, decontamination of the dryer units was commenced. The chemical powders and dusts that were still in and on the units were vacuumed from the units and properly containerized. The containers of collected chemical materials were then handed over to the client for proper disposal and recycling.

Once the equipment was decontaminated, both units were then demolished and removed from the facility. Due to door way and access routes the equipment had to be processed into small pieces to facilitate removal from the facility. The demolished equipment pieces were then sent offsite for scrap metal recycling.

The project was completed in approximately one week without incident or injury.
