

Universal Wrecking Corp. Completes Purchase and Scrap Metal Recycling of Damaged Cargo Containers

Universal Wrecking Corp. (UWC), a premier demolition and scrap metal contractor, recently completed the purchase and scrap metal recycling of damaged cargo containers.

A large client involved in shipping, contacted UWC to purchase over 50 cargo containers that were damaged beyond repair and needed to be scrapped. The containers varied in sizes from 20 foot long to 40 foot long. Approximately fifteen (15) of the containers were aluminum in composition, another fifteen (15) were steel and the remaining twenty (20) were refrigeration units ("reefer units"). The aluminum and steel containers were easy to process into scrap but the reefer units posed a bit more of a challenge due to the amount of insulation in these units which had to be separated and sorted from the scrap metal. UWC processed the cargo containers into scrap metal for recycling and provided the client with certificates of destruction.

Due to UWC's strong relationships in the scrap recycling industry, UWC was able to offer the client a substantial value for the cargo containers as scrap metal. The client was very pleased with the offer as well as UWC's prompt payments.
