

# Rotary Index Tables

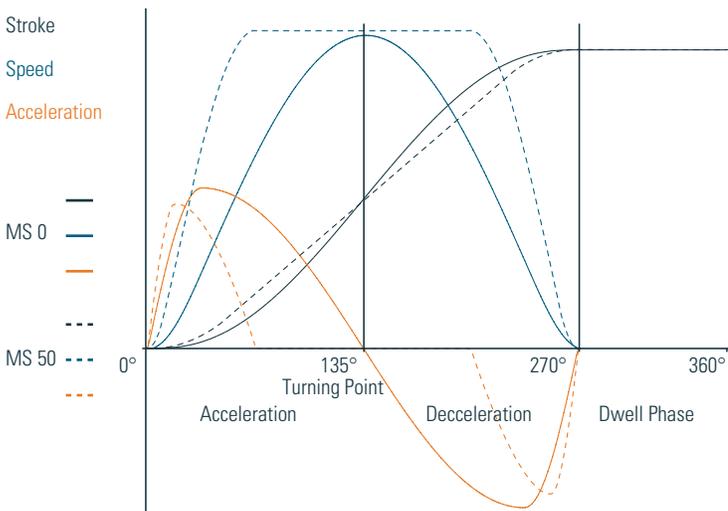

RT Series

The sky is the limit for the Motion product line. Flexible, made-to-order custom designs which are not featured in the product catalog have long been embedded in our corporate philosophy. We keep 10% of our entire workforce in reserve for these custom applications. Our skilled staff are available to assist our customers on a daily basis.

Our drives meet the highest standards regarding quality and precision. Our cams are manufactured in a different manner with regards to our competition, therefore it is often possible to use smaller rotary table sizes supplied by Motion instead of larger ones supplied by our competitors.

Our extensive design expertise enables us to meet customer requirements down to the last detail. We can combine the advantages of different forms of drives to create new value-added solutions which fit the bill completely. This is the added value which we have been offering to our customers in different sectors for many years.

### The rotary index table – design and mode of operation

The rotary table converts a uniform input motion into an intermittent output motion. The intermittent output motion is transmitted through our induction-hardened, precision-machined barrel cam. Mathematical laws of motion are applied to create a soft, smooth, zero-impact movement which is ideally tailored to the operation for any given case. Our design and construction results in a positive fit and zero-backlash positioning of the output flange (tool mounting surface).

No further locking device is required on the output flange. Additional locking devices can lead to forced positioning which can ruin the index table over the long-term.

The force is transmitted through the index table input shaft either by a three-phase brake motor with worm gearing or by a chain wheel or belt pulley. This is mounted to the barrel cam without any further gear stages and in turn rotates the star wheel and cam followers together with the output flange.

The output flange rotates on wire-race bearings which are free of play and backlash (mounted in steel rings - not in cast). Custom-dimensioned shaft sealing rings form an internal and external seal on the index table.

### Advantages for design engineers and special machine builders

Housing machined on all sides. Suitable for use in any mounting position required.

Mounting holes identical on top and bottom.

Large center thru-hole which is large enough to feed entire shafts through, and not just small wiring looms.

Dowel holes in housing and in output flange.

Recessed center column. No obstruction. Lengthened and machined to customer requirements.

Simultaneously rotating input shaft extension. Optional synchronization of other mechanical modules.

### Allowance for individual customer requirements

Choice of drive

Reinforced output flange bearing for higher tilting moment

Optional friction clutch on drive

Dwell and step angle can be tailored to requirements

All sizes also available as programmable FLEX index tables

Custom specified color at no extra charge

### Technical benefits for users

High reliability and long service life

Robust method of construction

Induction-hardened cams: smaller sizes for higher load factors

Needle or roller bearings fully immersed in oil bath. No wear.

Completely maintenance-free\*

Completely wear-free when used with optional universal control

Allen Bradley PLC

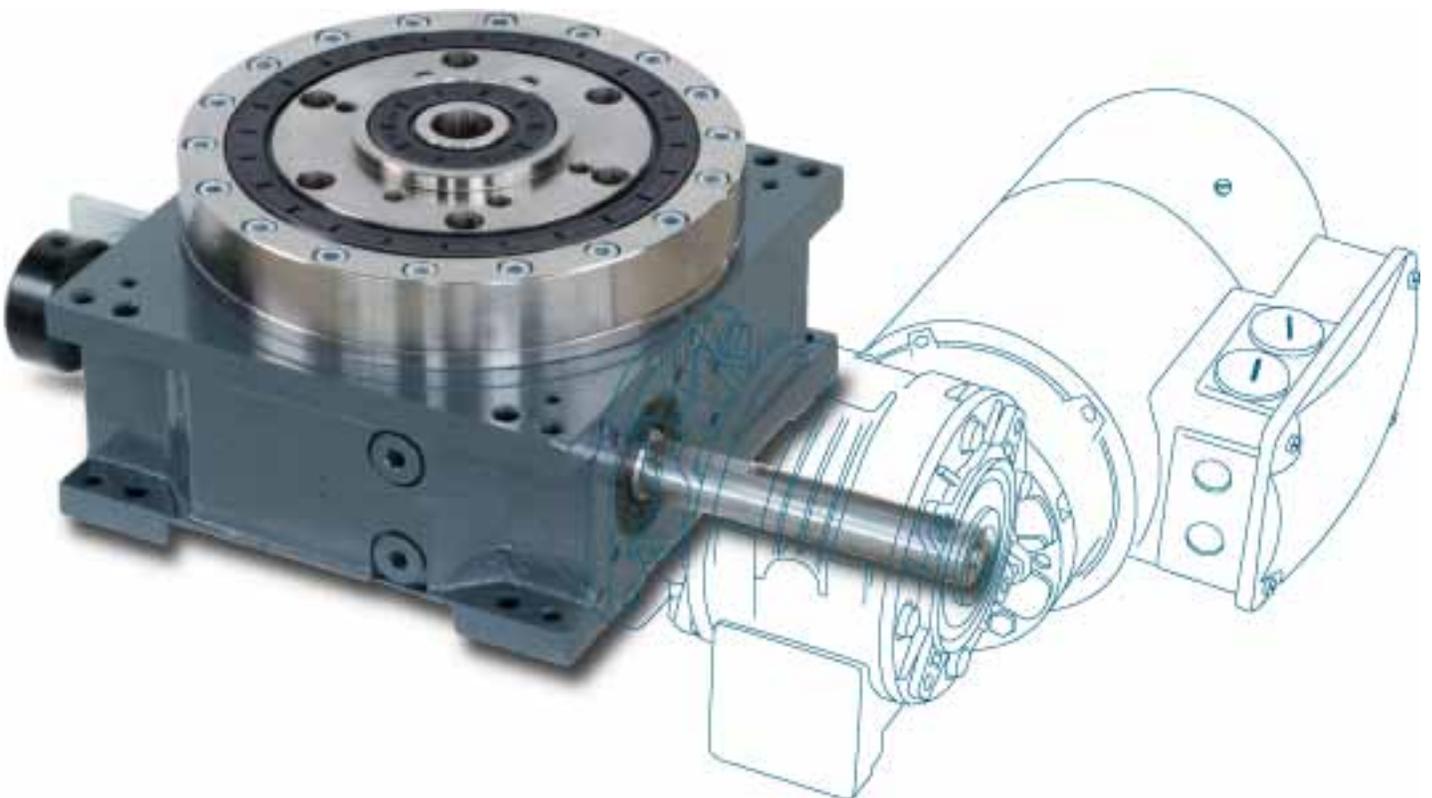

\* The bearing ring on the RT400, RT500, RT630 and RT900 needs to be re-lubricated at maintenance intervals (see operating manual)

# RT100

For mounted accessories up to  $\varnothing$  800mm. For rapid assembly of small parts, inspection of parts, or for feeding parts into relatively large installations. For use in microelectronics, the food industry and medical technology.

All RT Series tables available in fixed or FLEX programmable formats.

## RT100 Technical specifications

### Main dimensions

|  |                                |
|--|--------------------------------|
| Output flange Ø [mm]                                 | 120                            |
| Overall height (output flange screw-on surface) [mm] | 112                            |
| Center opening Ø [mm]                                | 20H8                           |
| Recommended max. size of rotating plate Ø [mm]       | 800                            |
| Index table weight [kg]                              | 16                             |
| Number of indexes                                    | 2,3,4,6,8,10,12,16,20,24,30,36 |
| Other numbers on request                             |                                |

### Standard drives

|             |            |
|-------------|------------|
| Motor       | Kobold/SEW |
| Gear unit   | FRS40      |
| Motor size  | IEC63/71   |
| Voltage [V] | 230/400    |
| Power [kW]  | 0.09-0.37  |

### Precision

|  |        |
|--|--------|
| Index precision *                        |        |
| In radian measure on cam follower Ø [mm] | ±0.008 |
| In angular seconds on cam follower Ø ["] | ±35    |
| Axial runout on cam follower Ø [mm]      | 0.01   |
| Concentricity on cam follower Ø [mm]     | 0.01   |

### Load on output flange

|                           |     |
|---------------------------|-----|
| Axial force Fa [kN]       | 6   |
| Radial force Fr [kN]      | 3.8 |
| Tilting moment Mk [kNm]   | 0.7 |
| <b>Reinforced version</b> |     |
| Tilting moment Mk [kNm]   | 1.5 |

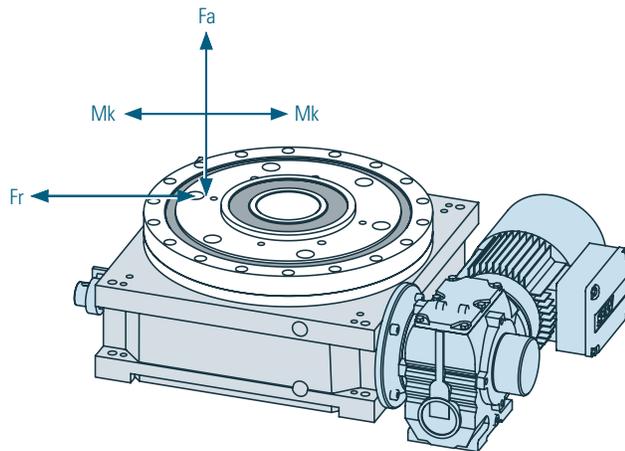

### Load on central column

|                         |      |
|-------------------------|------|
| Axial force Fa [kN]     | 5    |
| Tilting moment Mk [kNm] | 0.19 |

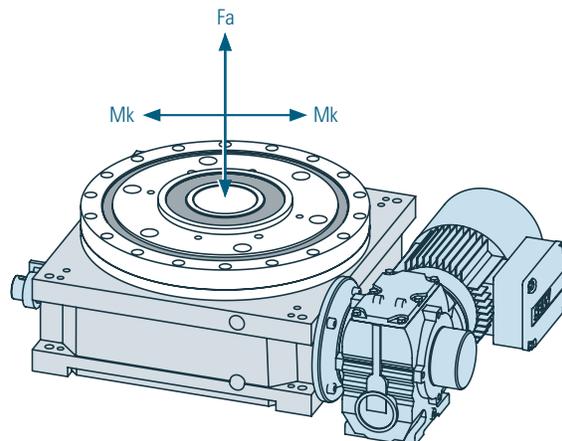

|                               |  |
|-------------------------------|--|
| Max. number of cycles [1/min] | 280                                    |
| Direction                     | clockwise, counterclockwise, reversing |
| Fitting position              | horizontal, vertical, upside down      |

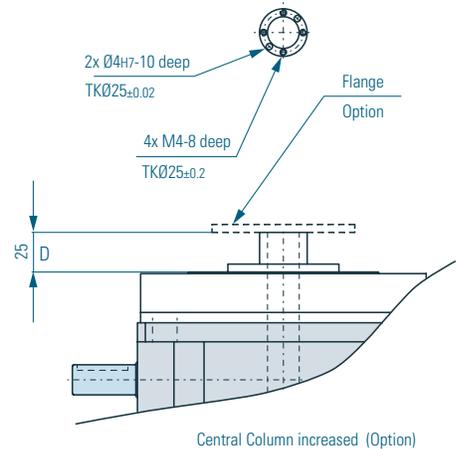

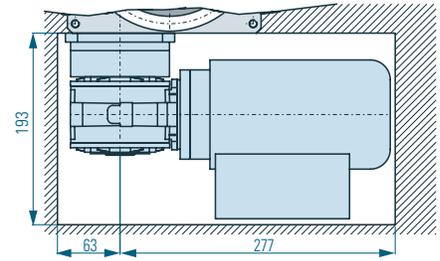

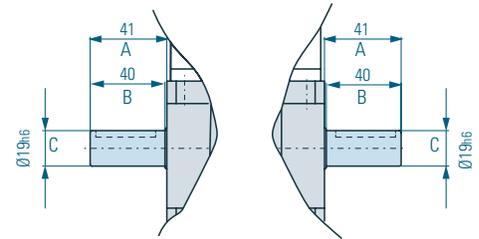

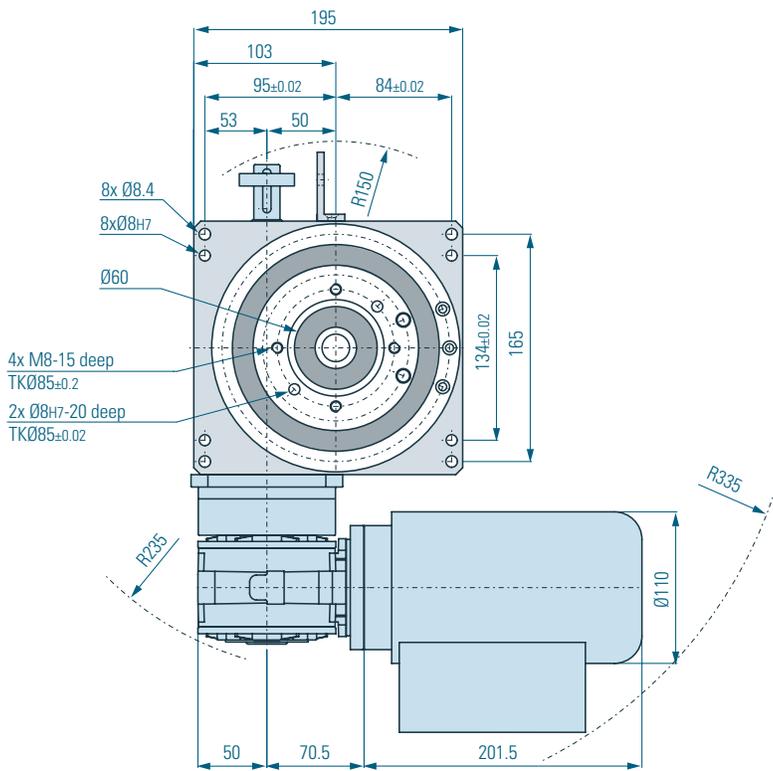

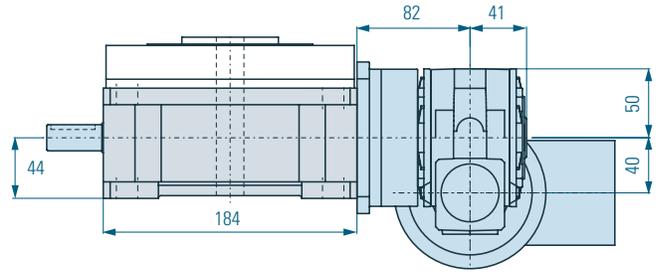

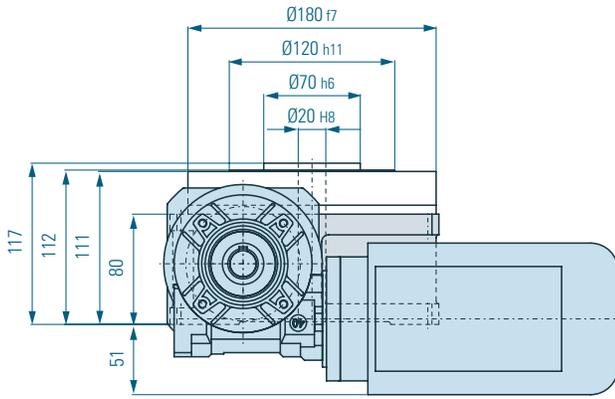

\* The error in index precision is 5 - 8 angular seconds greater at 16 or more indexes due to multiple dwell on the drive cam.

### Load on output flange

### Load on central column

## RT100 Dimensions

The dimensions shown here are the standard dimensions. The output flange, central column, housing and input shafts can be machined to your specifications. The central column can also be designed as a flange. Should you wish to drill additional holes, please consult us with regard to acceptable drilling depth.

- ⚠ Caution! Do not drill right through.
- ⚠ Please note that the opening for mounting the drive varies depending on the size of the drive.

- A = Length of input shaft
- B = Length of shaft to collar
- C = Diameter of input shaft
- D = Height of central column to supporting surface on output flange

## RT100 Load table

| Speed |   | 1    | 2    | 3    | 4    | 5    | 6    | 7    | 8    | 9    | 10   | 11   | 12   | 13   |

n = Number of stops / 360° revolution of output flange  
t = Step time in seconds

J = Mass moment of inertia (base plate + fixtures and parts) in Kgm<sup>2</sup>

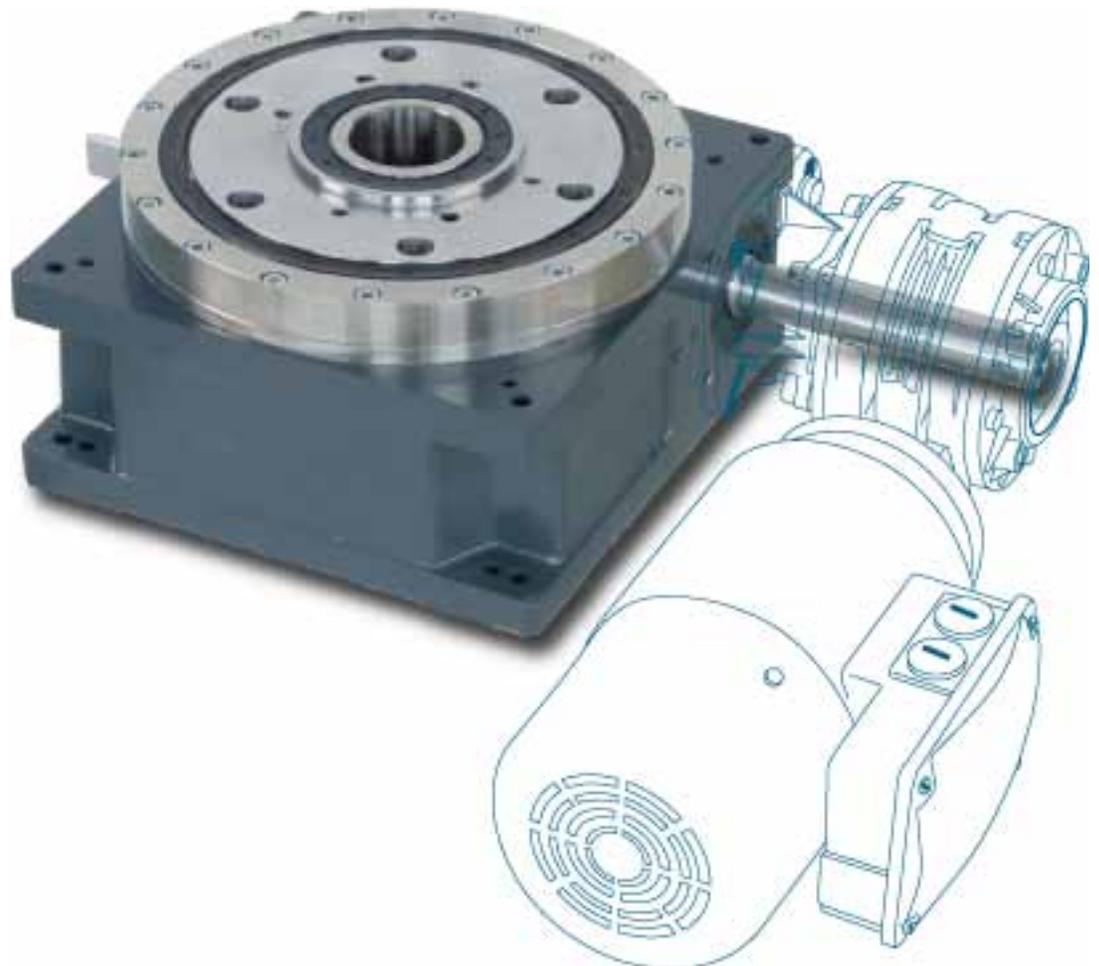

All RT Series tables available in fixed or FLEX programmable formats.

# RT160

Small design envelope, big performance. For mounted accessories up to Ø 1300 mm. Applications in assembly facilities for medium-sized parts: welding, riveting, assembling, printing/labeling. For use in assembly technology, microelectronics, the food industry and medical technology.

All RT Series tables available in fixed or FLEX programmable formats.

## RT160 Technical specifications

### Main dimensions

|  |                                |
|--|--------------------------------|
| Output flange Ø [mm]                                 | 185                            |
| Overall height (output flange screw-on surface) [mm] | 140                            |
| Center opening Ø [mm]                                | 50 <sub>H8</sub>               |
| Recommended max. size of rotating plate Ø [mm]       | 1300                           |
| Index table weight [kg]                              | 31                             |
| Number of indexes                                    | 2,3,4,6,8,10,12,16,20,24,30,36 |
| Other numbers on request                             |                                |

### Standard drives

t = Step time in seconds

J = Mass moment of inertia (base plate + fixtures and parts) in Kgm<sup>2</sup>

All RT Series tables available in fixed or FLEX programmable formats.

# RT200

Small design envelope, big performance. For mounted accessories up to  $\varnothing$  1800 mm. Applications in assembly facilities for medium-sized parts: welding, riveting, assembling, printing/labeling. For use in assembly engineering, microelectronics, the food industry and medical technology.

All RT Series tables available in fixed or FLEX programmable formats.

## RT200 Technical specifications

### Main dimensions

|  |                                |
|--|--------------------------------|
| Output flange Ø [mm]                                 | 240                            |
| Overall height (output flange screw-on surface) [mm] | 160                            |
| Center opening Ø [mm]                                | 60H8                           |
| Recommended max. size of rotating plate Ø [mm]       | 1800                           |
| Index table weight [kg]                              | 63                             |
| Number of indexes                                    | 2,3,4,6,8,10,12,16,20,24,30,36 |
| Other numbers on request                             |                                |

### Standard drives

|             |            |
|-------------|------------|
| Motor       | Kobold/SEW |
| Gear unit   | FRS50      |
| Motor size  | IEC71/80   |
| Voltage [V] | 230/400    |
| Power [kW]  | 0.25-0.75  |

### Precision

|  |        |
|--|--------|
| Index precision *                        |        |
| In radian measure on cam follower Ø [mm] | ±0.015 |
| In angular seconds on cam follower Ø ["] | ±30    |
| Axial runout on cam follower Ø [mm]      | 0.01   |
| Concentricity on cam follower Ø [mm]     | 0.01   |

### Load on output flange

|                            |     |
|----------------------------|-----|
| Axial force $F_a$ [kN]     | 21  |
| Radial force $F_r$ [kN]    | 11  |
| Tilting moment $M_k$ [kNm] | 3.7 |

### Reinforced version

|                            |   |
|----------------------------|---|
| Tilting moment $M_k$ [kNm] | 7 |
|----------------------------|---|

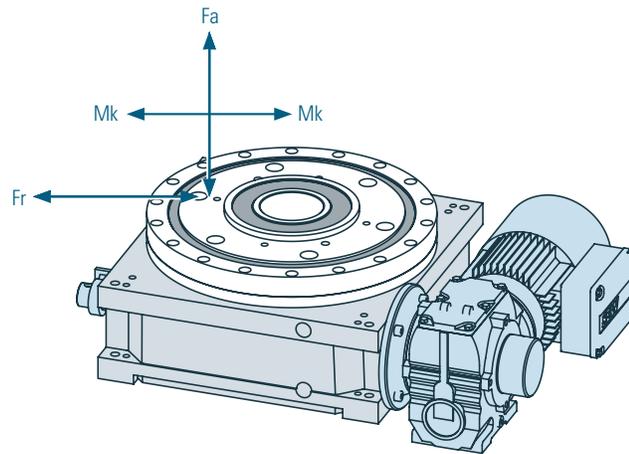

### Load on central column

|                            |      |
|----------------------------|------|
| Axial force $F_a$ [kN]     | 12.5 |
| Tilting moment $M_k$ [kNm] | 1.2  |

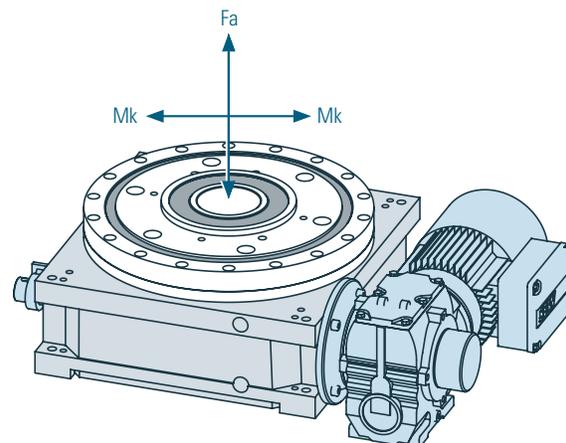

|                               |  |
|-------------------------------|--|
| Max. number of cycles [1/min] | 240                                    |
| Direction                     | clockwise, counterclockwise, reversing |
| Fitting position              | horizontal, vertical, upside down      |

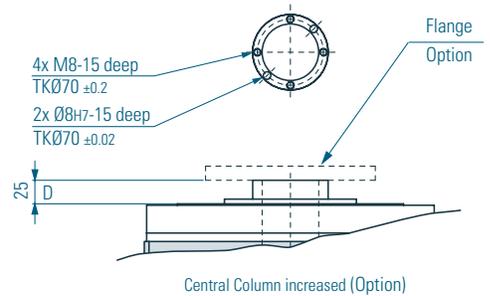

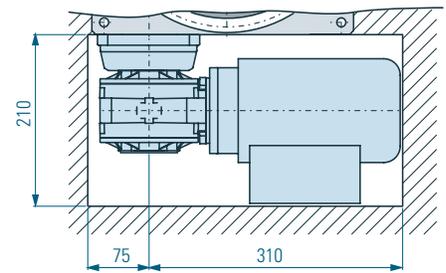

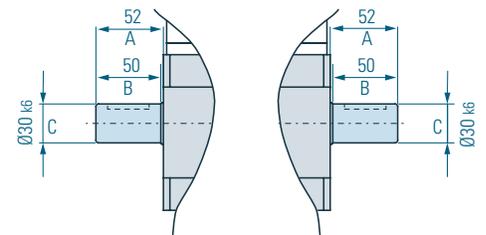

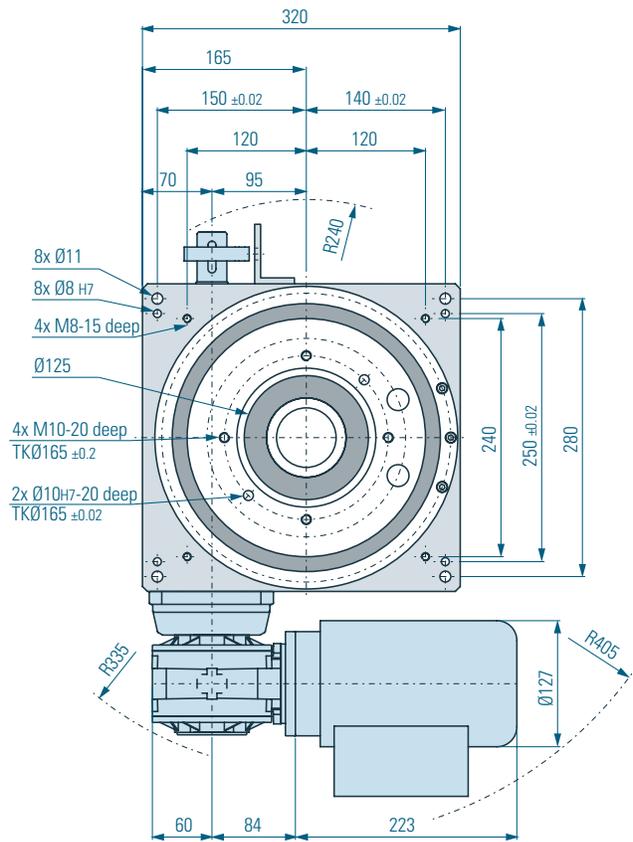

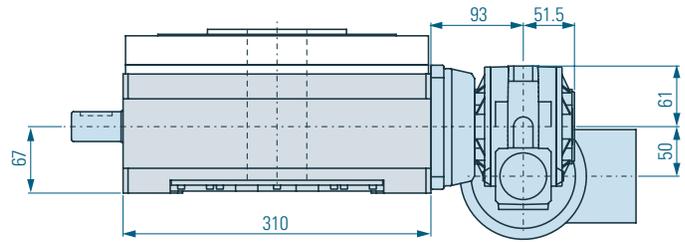

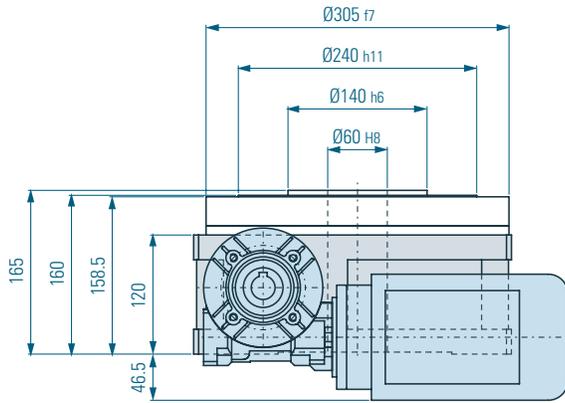

\* The error in index precision is 5 - 8 angular seconds greater at 16 or more indexes due to multiple dwell on the drive cam.

### Load on output flange

### Load on central column

## RT200 Dimensions

The dimensions shown here are the standard dimensions. The output flange, central column, housing and input shafts can be machined to your specifications. The central column can also be designed as a flange. Should you wish to drill additional holes, please consult us with regard to acceptable drilling depth.

**⚠ Caution!** Do not drill right through.  
**⚠ Please note that the opening for mounting the drive varies depending on the size of the drive.**

A = Length of input shaft  
 B = Length of shaft to collar  
 C = Diameter of input shaft  
 D = Height of central column to supporting surface on output flange

## RT250

From small parts to heavy duty. For mounted accessories up to Ø 2200mm. Applications in assembly facilities with relatively large and heavy parts: welding, riveting, assembling, printing/labeling and lightweight machining operations. For use in assembly technology, the automotive industry, the printing industry, and the welding industry.

All RT Series tables available in fixed or FLEX programmable formats.

## RT250 Technical specifications

### Main dimensions

|  |                                |
|--|--------------------------------|
| Output flange Ø [mm]                                 | 285                            |
| Overall height (output flange screw-on surface) [mm] | 174                            |
| Center opening Ø [mm]                                | 80 <sub>H8</sub>               |
| Recommended max. size of rotating plate Ø [mm]       | 2200                           |
| Index table weight [kg]                              | 100                            |

n = Number of stops / 360° revolution of output flange  
t = Step time in seconds

J = Mass moment of inertia (base plate + fixtures and parts) in Kgm<sup>2</sup>

All RT Series tables available in fixed or FLEX programmable formats.

## RT400

For mounted accessories up to Ø 3500mm. Applications in assembly facilities with large and heavy parts: welding, riveting, assembling, printing/labeling and lightweight machining operations. Suitable for pulley-drum motors. For use in assembly technology, the automotive industry and the ceramics industry.

All RT Series tables available in fixed or FLEX programmable formats.

## RT400 Technical specifications

### Main dimensions

|  |                                |
|--|--------------------------------|
| Output flange Ø [mm]                                 | 460                            |
| Overall height (output flange screw-on surface) [mm] | 316                            |
| Center opening Ø [mm]                                | 110 <sup>H8</sup>              |
| Recommended max. size of rotating plate Ø [mm]       | 3500                           |
| Index table weight [kg]                              | 325                            |
| Number of indexes                                    | 2,3,4,6,8,10,12,16,20,24,30,36 |
| Other numbers on request                             |                                |

### Standard drives

|             |            |
|-------------|------------|
| Motor       | Kobold/SEW |
| Gear unit   | SAF77      |
| Motor size  | IEC80-132  |
| Voltage [V] | 230/400    |
| Power [kW]  | 0.75-4.0   |

### Precision

|  |        |
|--|--------|
| Index precision *                        |        |
| In radian measure on cam follower Ø [mm] | ±0.017 |
| In angular seconds on cam follower Ø ["] | 18     |
| Axial runout on cam follower Ø [mm]      | 0.01   |
| Concentricity on cam follower Ø [mm]     | 0.01   |

### Load on output flange

|                            |    |
|----------------------------|----|
| Axial force $F_a$ [kN]     | 50 |
| Radial force $F_r$ [kN]    | 26 |
| Tilting moment $M_k$ [kNm] | 10 |

### Reinforced version

|                            |    |
|----------------------------|----|
| Tilting moment $M_k$ [kNm] | 21 |
|----------------------------|----|

### Load on central column

|                            |     |
|----------------------------|-----|
| Axial force $F_a$ [kN]     | 45  |
| Tilting moment $M_k$ [kNm] | 5.5 |

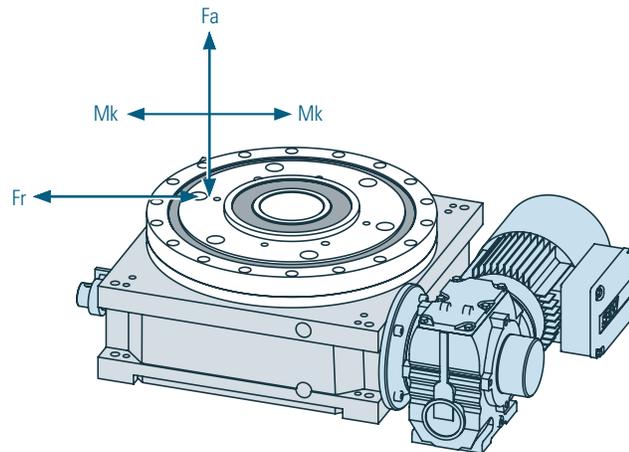

|                               |     |
|-------------------------------|-----|
| Max. number of cycles [1/min] | 145 |
|-------------------------------|-----|

Direction clockwise, counterclockwise, reversing

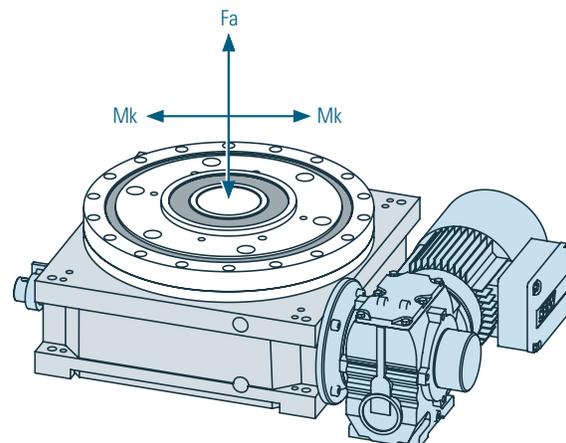

Fitting position horizontal, vertical, upside down

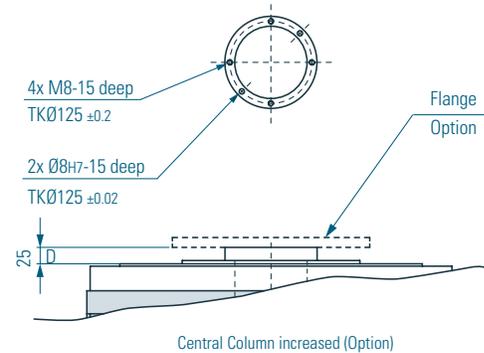

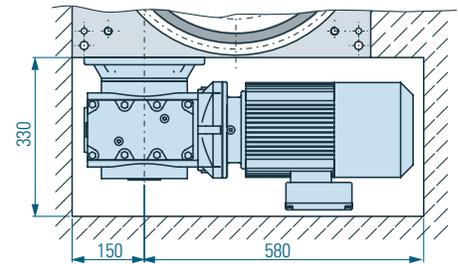

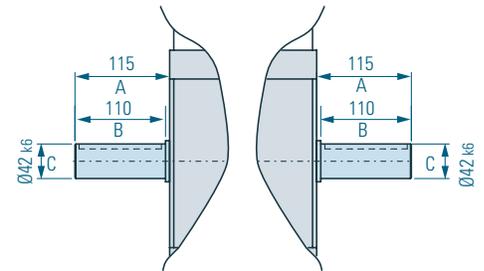

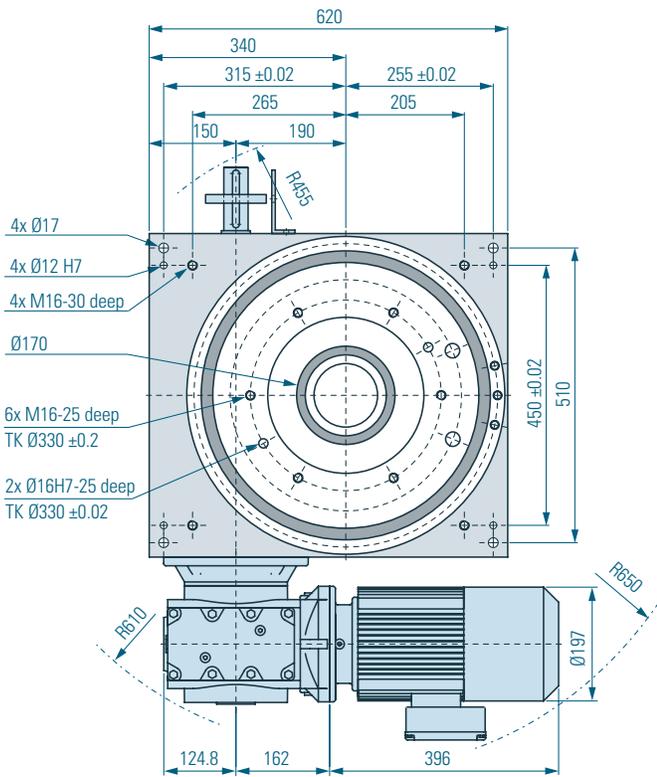

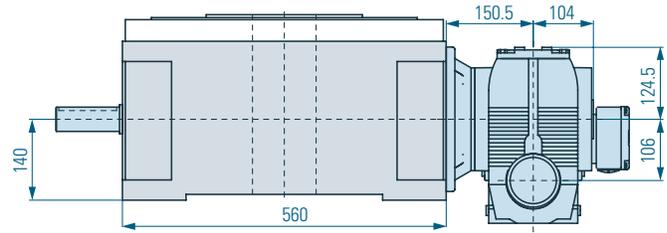

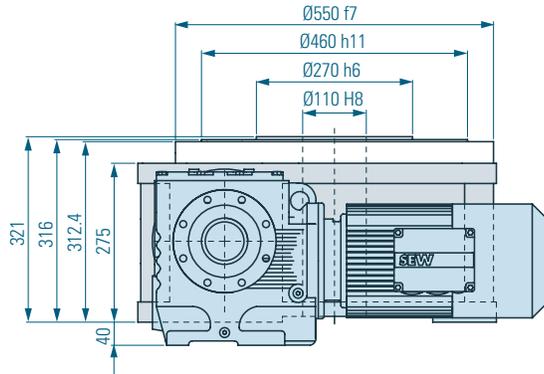

\* The error in index precision is 5 - 8 angular seconds greater at 16 or more indexes due to multiple dwell on the drive cam.

### Load on output flange

### Load on central column

## RT400 Dimensions

The dimensions shown here are the standard dimensions. The output flange, central column, housing and input shafts can be machined to your specifications.

The central column can also be designed as a flange.

Should you wish to drill additional holes, please consult us with regard to acceptable drilling depth.

**⚠ Caution!** Do not drill right through.

**⚠ Please note** that the opening for mounting the drive varies depending on the size of the drive.

A = Length of input shaft

B = Length of shaft to collar

C = Diameter of input shaft

D = Height of central column to supporting surface on output flange

n = Number of stops / 360° revolution of output flange  
t = Step time in seconds

J = Mass moment of inertia (base plate + fixtures and parts) in Kgm<sup>2</sup>

All RT Series tables available in fixed or FLEX programmable formats.

# RT630

For mounted accessories up to Ø 6000mm. Applications in assembly facilities with large and heavy parts: welding, riveting, assembling, printing/labeling and lightweight machining operations. For use in assembly technology and bodywork in the automotive industry.

All RT Series tables available in fixed or FLEX programmable formats.

## RT630 Technical specifications

### Main dimensions

|  |                                |
|--|--------------------------------|
| Output flange Ø [mm]                                 | 778                            |
| Overall height (output flange screw-on surface) [mm] | 560                            |
| Center opening Ø [mm]                                | 250 <sub>H8</sub>              |
| Recommended max. size of rotating plate Ø [mm]       | 6000                           |
| Index table weight [kg]                              | 1600                           |
| Number of indexes                                    | 2,3,4,6,8,10,12,16,20,24,30,36 |
| Other numbers on request                             |                                |

### Standard drives

|             |            |
|-------------|------------|
| Motor       | Kobold/SEW |
| Gear unit   | SAF87/97   |
| Motor size  | IEC100-132 |
| Voltage [V] | 230/400    |
| Power [kW]  | 3-7.5      |

### Precision

|  |        |
|--|--------|
| Index precision *                        |        |
| In radian measure on cam follower Ø [mm] | ±0.023 |
| In angular seconds on cam follower Ø ["] | ±15    |
| Axial runout on cam follower Ø [mm]      | 0.01   |
| Concentricity on cam follower Ø [mm]     | 0.01   |

### Load on output flange

|                            |     |
|----------------------------|-----|
| Axial force $F_a$ [kN]     | 145 |
| Radial force $F_r$ [kN]    | 86  |
| Tilting moment $M_k$ [kNm] | 41  |

### Reinforced version

|                            |    |
|----------------------------|----|
| Tilting moment $M_k$ [kNm] | 72 |
|----------------------------|----|

### Load on central column

|                            |    |
|----------------------------|----|
| Axial force $F_a$ [kN]     | 80 |
| Tilting moment $M_k$ [kNm] | 9  |

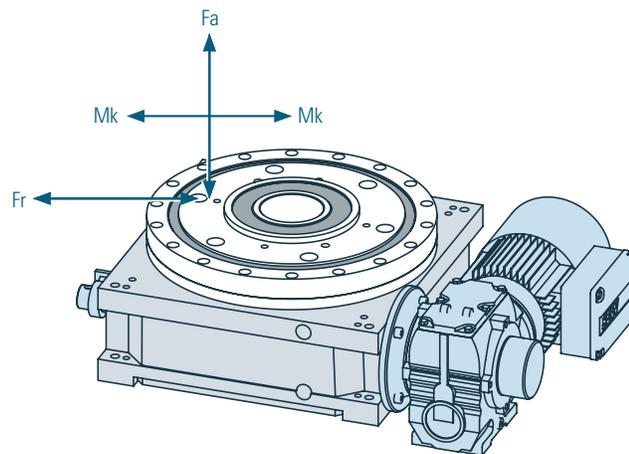

|                               |     |
|-------------------------------|-----|
| Max. number of cycles [1/min] | 105 |
|-------------------------------|-----|

Direction clockwise, counterclockwise, reversing

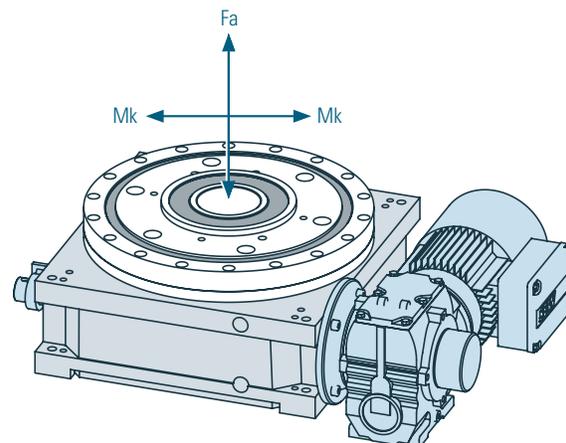

Fitting position horizontal, vertical, upside down

\* The error in index precision is 5 - 8 angular seconds greater at 16 or more indexes due to multiple dwell on the drive cam.

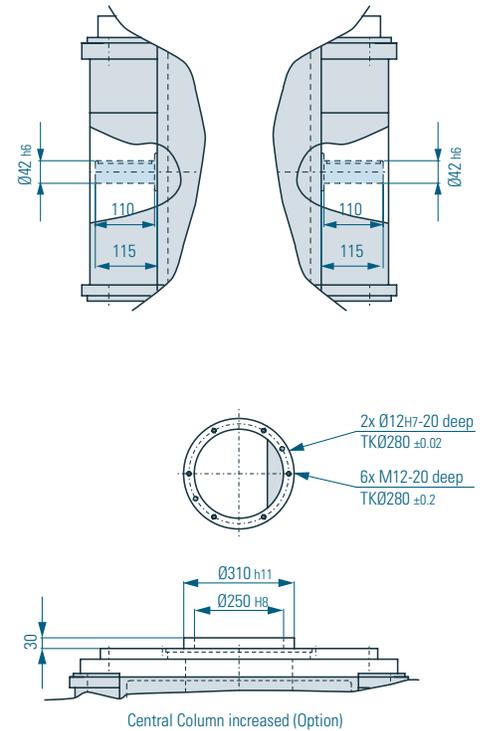

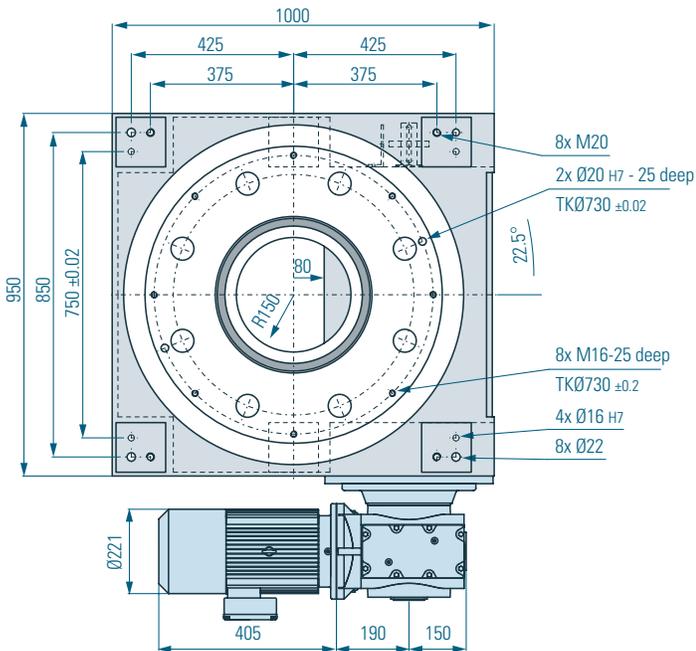

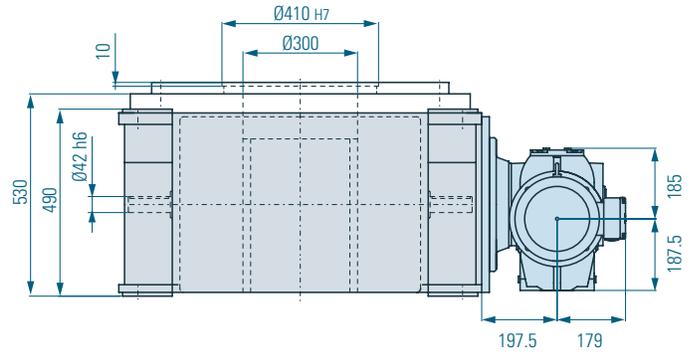

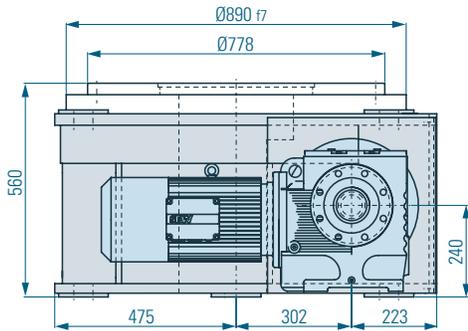

### Load on output flange

### Load on central column

All RT Series tables available in fixed or FLEX programmable formats.

## RT630 Dimensions

The dimensions shown here are the standard dimensions. The output flange, central column, housing and input shafts can be machined to your specifications.

The central column can also be designed as a flange.

Should you wish to drill additional holes, please consult us with regard to acceptable drilling depth.

⚠ Caution! Do not drill right through.

⚠ Please note that the opening for mounting the drive varies depending on the size of the drive.

A = Length of input shaft

B = Length of shaft to collar

C = Diameter of input shaft

D = Height of central column to supporting surface on output flange

## RT630 Load table

| Speed |   | 1       | 2       | 3       | 4       | 5        | 6        | 7        | 8        | 9        | 10        | 11       | 12        | 13        |

n = Number of steps / 360° revolution of output flange  
t = Step time in seconds

J = Mass moment of inertia (base plate + fixtures and parts) in Kgm<sup>2</sup>

From n=16 the output flange steps 2 times per cam revolution.  
From n=36 the output flange steps 3 times per cam revolution.

All RT Series tables available in fixed or FLEX programmable formats.

# RT900

For mounted accessories up to Ø 9500mm. Applications in assembly facilities with large and heavy parts: welding, riveting, assembling, printing/labeling and lightweight machining operations. For use in assembly technology and bodywork in the automotive industry.

All RT Series tables available in fixed or FLEX programmable formats.

### Main dimensions

|  |                                |
|--|--------------------------------|
| Output flange Ø [mm]                                 | 1400                           |
| Overall height (output flange screw-on surface) [mm] | 611                            |
| Center opening Ø [mm]                                | 400 <sub>H8</sub>              |
| Recommended max. size of rotating plate Ø [mm]       | 9500                           |
| Index table weight [kg]                              | 2230                           |
| Number of indexes                                    | 2,3,4,6,8,10,12,16,20,24,30,36 |
| Other numbers on request                             |                                |

### Standard drives

|             |            |
|-------------|------------|
| Motor       | SEW        |
| Gear unit   | n/a        |
| Motor size  | IEC100-160 |
| Voltage [V] | 230/460    |
| Power [kW]  | 5.5        |

### Precision

|  |     |
|--|-----|
| Index precision *                        |     |
| In radian measure on cam follower Ø [mm] | n/a |
| In angular seconds on cam follower Ø ["] | n/a |
| Axial runout on cam follower Ø [mm]      | n/a |
| Concentricity on cam follower Ø [mm]     | n/a |

### Load on output flange

|                            |      |
|----------------------------|------|
| Axial force $F_a$ [kN]     | 1710 |
| Radial force $F_r$ [kN]    | 804  |
| Tilting moment $M_k$ [kNm] | 41   |

### Reinforced version

|                            |    |
|----------------------------|----|
| Tilting moment $M_k$ [kNm] | 72 |
|----------------------------|----|

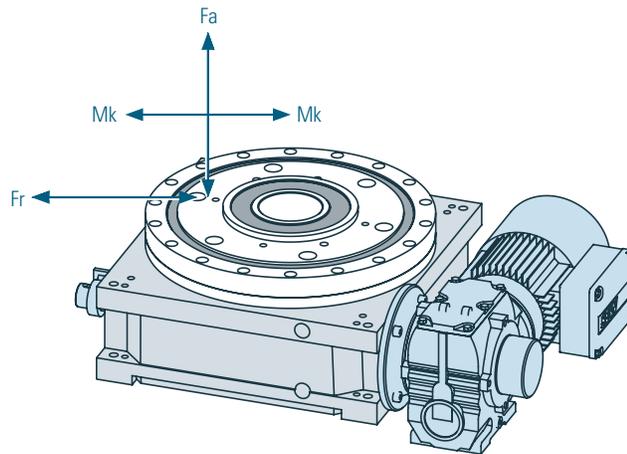

### Load on central column

|                            |    |
|----------------------------|----|
| Axial force $F_a$ [kN]     | 80 |
| Tilting moment $M_k$ [kNm] | 9  |

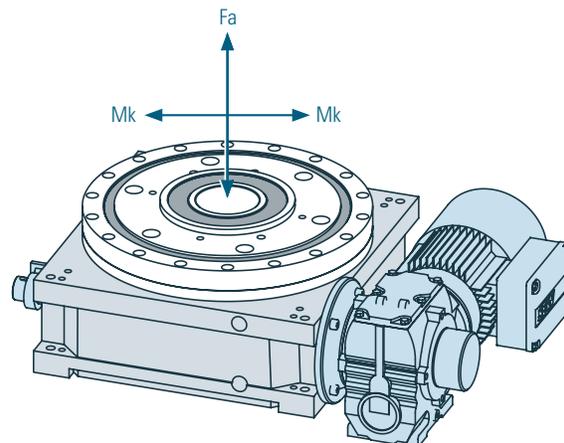

|                               |  |
|-------------------------------|--|
| Max. number of cycles [1/min] | 105                                    |
| Direction                     | clockwise, counterclockwise, reversing |
| Fitting position              | horizontal, vertical, upside down      |

\* The error in index precision is 5 - 8 angular seconds greater at 16 or more indexes due to multiple dwell on the drive cam.

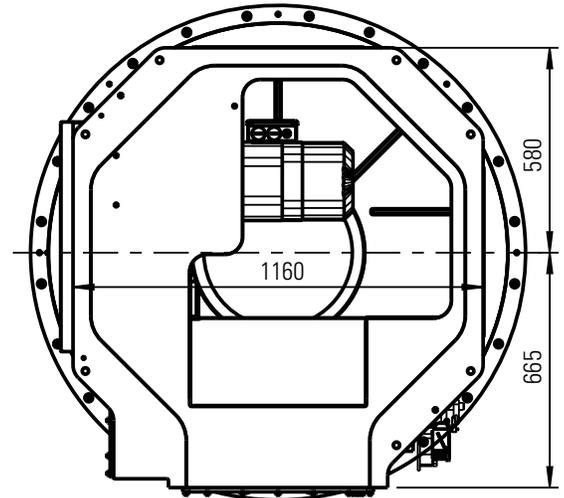

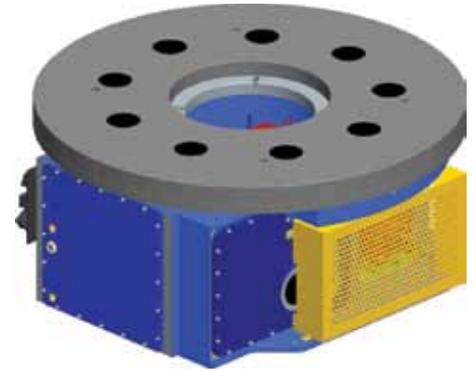

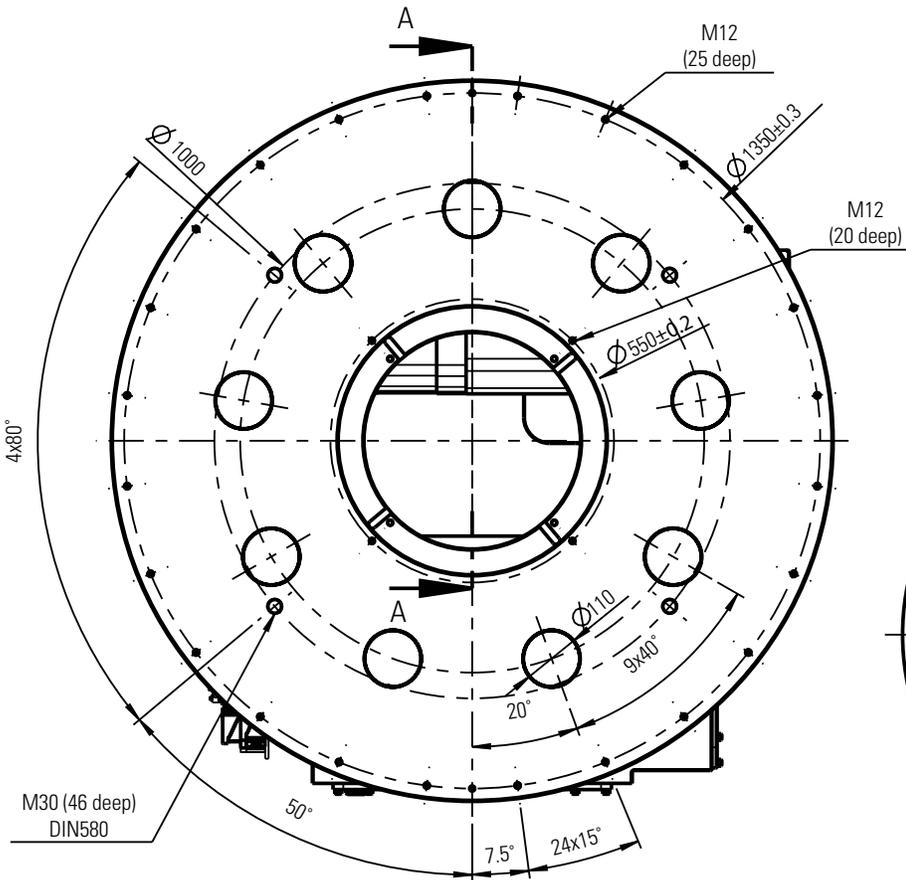

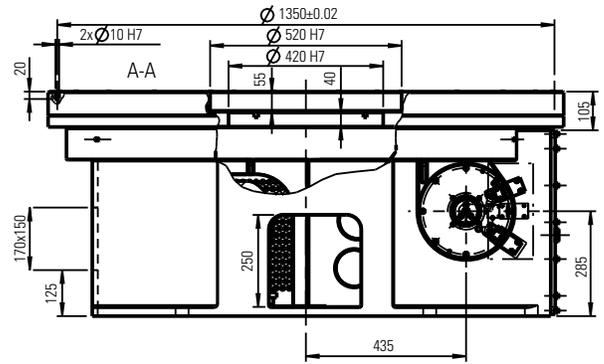

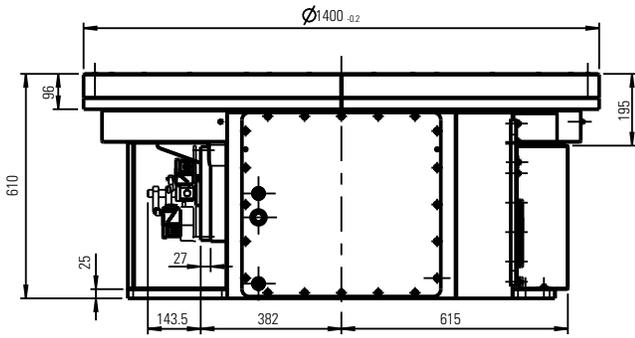

### Load on output flange

### Load on central column

All RT Series tables available in fixed or FLEX programmable formats.

## RT900 Dimensions

The dimensions shown here are the standard dimensions. The output flange, central column, housing and input shafts can be machined to your specifications.

The central column can also be designed as a flange.

Should you wish to drill additional holes, please consult us with regard to acceptable drilling depth.

⚠ Caution! Do not drill right through.

⚠ Please note that the opening for mounting the drive varies depending on the size of the drive.

## RT900 Load table

Please contact Motion Index Drives for loading capabilities of the RT900.

## Inquiry and order form for rotary table

All RT Series tables available in fixed or FLEX programmable formats.
