

Aluminum Pipe & Tubing

When Weight Matters

High-quality designs need high-quality components, whether they are intended for the medical, aerospace, defense, or high-tech industries. When tubing is called for, keep these points in mind.

The Value of Aluminum Tubing

When you choose tubing for your design, you invest in the quality of your end product. Aluminum tubing gives you a weight advantage from the start: A part made from aluminum weighs one-third as much as the same part made from stainless steel.

Proven Performance for Your Design

You need tubing that can function under your stringent application requirements. Whether your design sees steam sterilization, temperature cycling, pressure variations, vibration, or other mechanical stresses, aluminum is up to the task.

Secondary Operations Tailor Your Tubing

Complex designs need more than just aluminum tubing. Eagle can bend, cut, flare, and fabricate an aluminum tube to your custom specifications.

Partners in Your Quest for Quality

Building a high-quality product means ensuring the quality of each component. For your design, you need an aluminum tubing supplier with the quality certifications you trust, including ISO 9001, AS 9100, and ISO 13485.

With a name like Eagle Stainless, you may think we only work with stainless steel. But, we also fabricate and distribute aluminum tubes in alloys 2024, 3003, 5052, 6061, and 7075 in a variety of tempers for aerospace, marine, healthcare, and commercial applications where light weight, strength, and corrosion resistance are required.

Give us a call at 800-528-8650 or visit <https://eagletube.com/product-category/aluminum-tubing> and see how we can help you maximize the value, reliability, and performance of your design!
