

SOLUTIONS

**Solutions . . .
. . . for impact pads**

New Design!

 Impact Pads are used at belt conveyor discharge areas to slow product flow. Impact pads reduce wear problems at 90° discharge areas as well as downstream.

 The Corrugated/Sawtooth Pad has been the industry standard for the past 15 years and bp continues to feature the corrugated pad.

 NEW Dimpled Pad is now being offered by bp and is the most current design. This design allows the product to lodge between the dimples. Product impacting product reduces the overall wear to the impact pad.
