Solutions . . .

. . . for urethane SPINNERS

**Salt... Fertilizer... Sand,
Improved Design
SPINNERS**

**Providing
High Performance...
Low Cost... Minimum Maintenance**

Light weight, corrosion proof spinners offer many advantages over the conventional steel spinners. Made with flexible and tough abrasion resistant urethane, they give long operational life and are not subject to rusting from moisture and salt.

Because sand does not freeze to the urethane spinner, spreading effectiveness stays at a high level. Its flexibility helps to avoid costly replacements due to physical and mechanical damage. All of these factors add up to saving money on replacements, maintenance labor and downtime.
